Important: Due Dates
❖ Section A Final Exam - 7/22 @ 9am and 11am if you have a second course
❖ Marking Period 1-7/22 Section A or 50% of a 1 section Course
❖ Section B Final Exam and other Courses Final Exam - 7/22 @ 9am and 11am if you have a second course
❖ Marking Period 2-8/13 Section B or 100% of a 1 Section Course

How to stay aware of due dates:

There are several things you can check to make sure you know when your work is due. While you should be constantly working throughout the entirety of the course, there is a deadline for when each class must be at 100% completion. For semester long courses students will need to be 50% through the course by the end of Marking Period 1. For courses that are have a semester A and semester B section, typically core courses, they must be at 100% complete by the end of the quarter the teacher will post the deadlines for all courses on the board and send them to your messages folder in Edmentum. Additionally, you can see the final (100% complete) due date on your Edmentum. Take a look:

The messages button is where you can check for important information from the teacher such as deadlines, assignment changes, and any other useful information that might help you be successful. Be sure to check this regularly.

Each class will have a pacing icon and due date posted in the bottom right corner of that class. This due date indicates when the class must be at 100% complete. This does not account for other deadlines like being at 50% complete which your teacher will likely let you know about through a class message. Be sure to check those messages!

How to get through all of the work in time:

- Pretests: While these are not required, they are highly recommended. By doing a pretest and being successful, you may become exempt from several of your mastery tests. If the pretest decides you have already mastered a concept you will see a Blue E pop up next to the mastery test to let you know you are exempt. In other words, it gives you an automatic 100% on that test.
- Discussions: These are often based on your opinion or prior knowledge. The most common mistake is not fully answering the question. Be sure that if there are multiple questions, you have multiple answers. You can use outside resources to help you answer these questions, but be sure you put it in your own wording (paraphrase) and avoid copying (plagiarizing).
Activities: Typically, you want to do these last. These are based on all the knowledge you have gained from that unit, so you want to wait until you have completed the tests and discussions. These also tend to take the longest amount of time, so give yourself plenty of time to finish these. If you are taking a Science class be sure to check your messages because your teacher will be sending you some useful links to help with Life Science/Environmental Science and Physical Science. Your activities for science should clearly show you used the links to help in answering the questions rather than just guessing.

Tutorials: These are the lessons! You should always go through these to learn more information for mastery tests. Feel free to take notes or pictures of these to help you with your mastery tests. You can also look online for more information if anything is unclear. Often times the tutorials will ask you to complete some kind of activity or check point. Do not spend a lot of time on these since they are not graded. You can write a couple things in these boxes, but then move on. Spend more time focusing on reading the information it gives you in the lesson.

Mastery Tests: These are typically 5 questions and a mix of multiple choice or fill in the blank. You can use any notes you took from the tutorials or online to help you with this. You will also have multiple opportunities to complete these. If you get less than an 80% on a mastery test it will automatically lock. To get it unlocked all you have to do is go through the tutorial again and it will unlock for you. Otherwise, you will need to wait for the teacher to unlock it to try again.

Post Tests: You will have ONE opportunity to complete these. Under typical circumstances these are locked and completed in the presence of a teacher. However, in the work from home environment these will be unlocked. The post test is a mix of questions pulled from all the mastery tests and tutorials from that unit. Just do your best with these, but don’t spend too much time on them since they are worth a smaller percentage of your grade.

End of Semester Test: When you have finished everything for the entire class you should do this. These are the longest test out of all the course and will be factored into your grade from completion of the course.
